

DEEP SEARCH: DEEP Sea Exploration to Advance Research on Coral/Canyon/Cold seep Habitats

[Home](#) / [Expeditions](#) / [DEEP SEARCH](#)

Mission Overview

On this first cruise of the DEEP Sea Exploration to Advance Research on Coral/Canyon/Cold seep Habitats (DEEP SEARCH) program, scientists used a combination of mapping with water column profiling and sampling to improve knowledge of the geology along the U.S. continental margin, the types of communities found on the seafloor, and the mid-water communities that interact with those seafloor communities.

Presentation to be posted prior to Habitat and Ecosystem AP Webinar on April 22, 2020.
