# Update on Headboat Data Entry

Kenneth Brennan

**NOAA FISHERIES**

- **Increased efficiency of electronic reporting and the capabilities of Oracle database streamlined data collection + processing, hence:**
  - **2014 estimated headboat landings and angler days for the South Atlantic were completed 3-weeks early (by 2/12/2015)**
- **As of 2015, the Headboat Survey will provide estimated landings on a two-month basis similar to MRIP wave estimates. This important step**
  - **allows managers to anticipate the availability of these estimates on a regular basis, which in turn**
  - **enables them to more closely monitor ACLs for various species.**
