	First Name: Stephen	City: newport State: North Carolina	Private Recreational	the dates of survey April-October miss the northern black sea bass migration from Cape Hatteras into more southerly waters in North Carolina. The larger darker bass show up in great numbers off Cape Lookout out to 100 feet of depth where the water is colder. please sample Year Round to get a more accurate sample. Your sample will show a great increase in winter bass that you are ignoring in your sampling. There are lots of days in the winter to do a survey from 2-15 miles offshore to our rocks. I have a degree in biology from Emory College and have recreationally off Morehead City for over 40 years. Your response is appreciated
