FISHstory

FISHstory Project Components

Digitize &
archive historic
photos

Over 1,374 photos digitized &
archived

For-hire catch
composition in
Zooniverse

Over 2,120 volunteers made
35,740 classifications
Validation Team reviewed 180
photos

Method to
estimate length

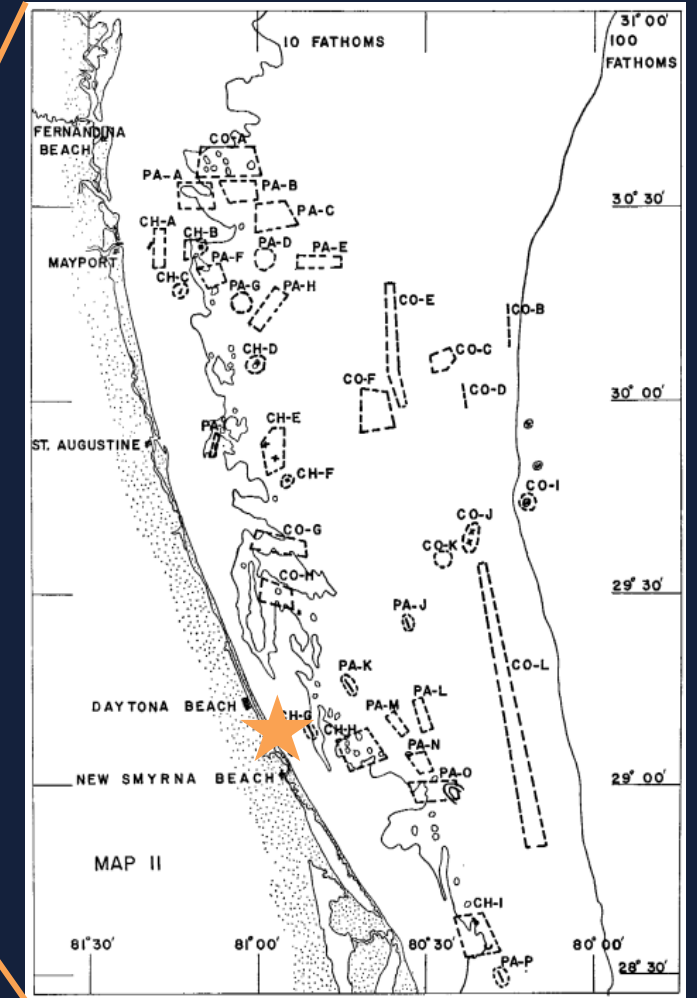

All 1,374 photos reviewed for
King Mackerel

Historical Photo Overview

Photo Location:
Daytona Beach, FL

Photos from fishing trips
departing from:
Inlet Harbor & Timmons
Fish Camp

Moe, M. A. (1963). A Survey of
Offshore Fishing in Florida
(Rep. No. Four).

Historical Photo Overview

Percentage of photos by decade
Photo range: 1949 - 1975

Percentage of photos by month

Historical Photo Overview

88% of photos from 5 vessels

CAUGHT AT **TIMMONS** CL 3-5825
FISHING CAMP
DAYTONA BEACH, FLA.

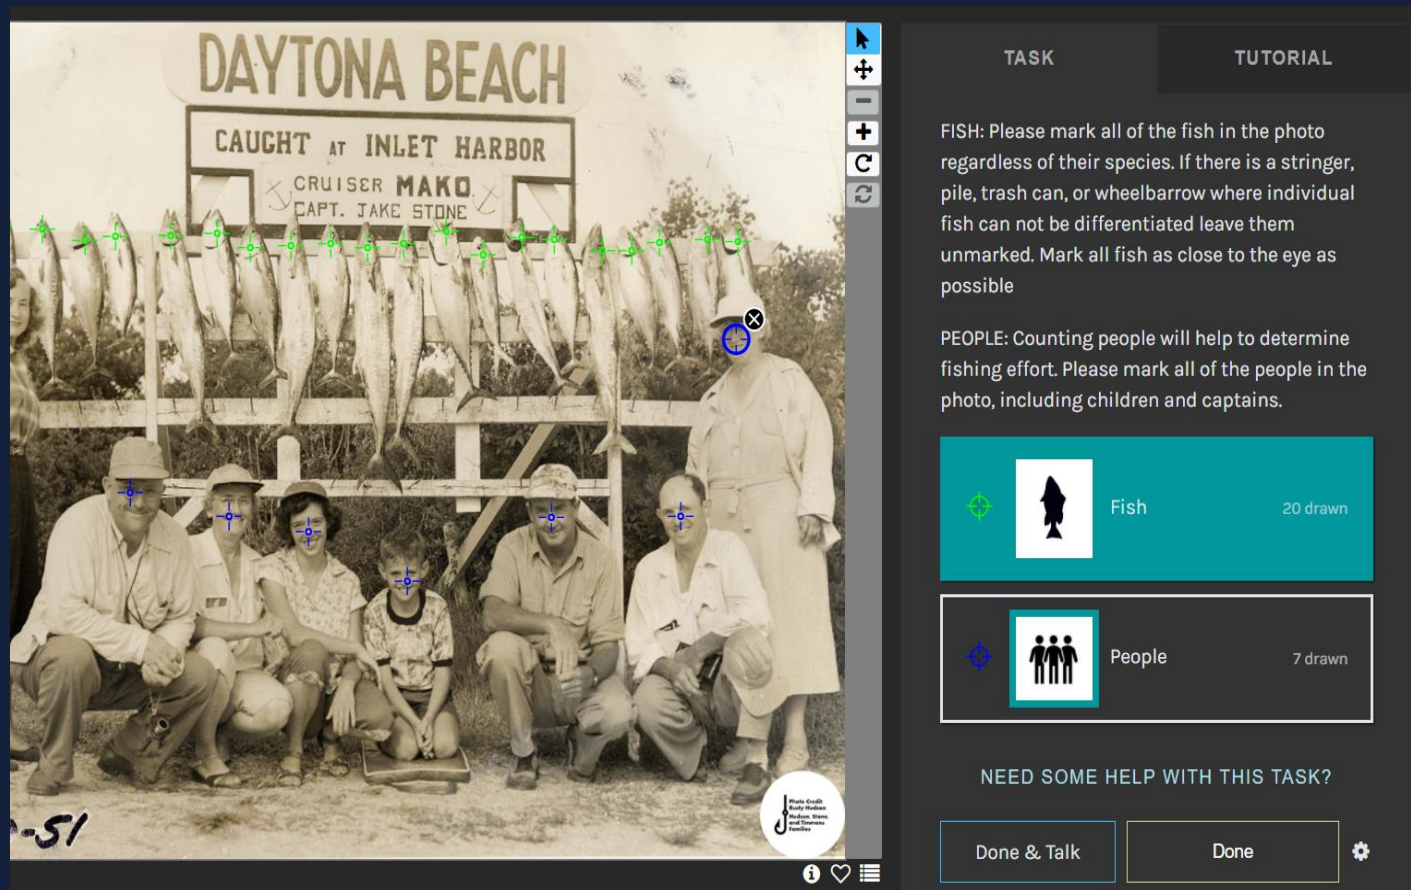

Zooniverse Workflows

FISH & PEOPLE: Count

- Count the total number of fish and people in the photos
- 10 volunteers per photo
- No Validation Team Review
- 1,374 photos complete

TASK **TUTORIAL**

FISH: Please mark all of the fish in the photo regardless of their species. If there is a stringer, pile, trash can, or wheelbarrow where individual fish can not be differentiated leave them unmarked. Mark all fish as close to the eye as possible

PEOPLE: Counting people will help to determine fishing effort. Please mark all of the people in the photo, including children and captains.

 Fish 20 drawn

 People 7 drawn

NEED SOME HELP WITH THIS TASK?

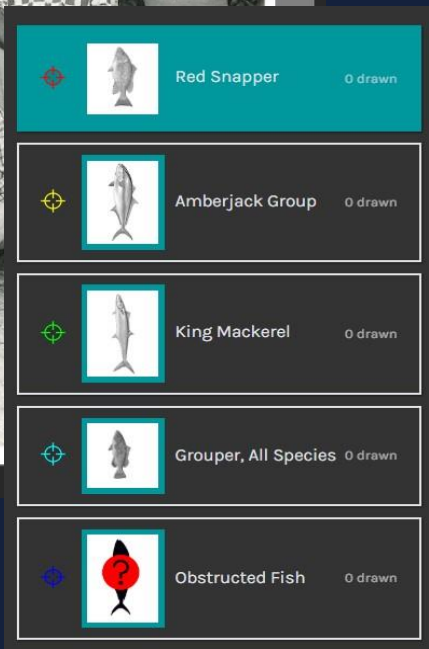

[Done & Talk](#) [Done](#) 

Zooniverse Workflows

FISH: Classify

- Identify fish into 16 species or species groups
- Document obstructed fish
- Tiered data collection via two tasks
- 20 volunteers per photo
- Validation Team review when substantial disagreement
- 1,000 photos complete

Zooniverse Workflows

| Shape | Tail |
|---|---|
|  Snapper, Other |  Dolphin Fish/Mahi |
|  Jack, Other |  Flounder |
|  Hammerhead Shark |  Gray Triggerfish |
|  Shark, Other |  Little Tunny |
|  Black Sea Bass |  Porgy/Grunt |
|  Cobia |  Other |

.....

Dolphin Fish/Mahi

Dolphin Fish are brilliantly colored with blue, green, and yellow however this coloring fades once the fish dies. Male Dolphin Fish have a vertical, wide forehead with a body that tapers to the tail. Females have a softer sloping forehead (see last image). These fish have a single dark dorsal fin that runs from behind the head to the tail. The tail of this fish is long and narrowly forked.

How many of this species or species group are present in the photo?

1 2 3 4 5 6-10 11-15 16+

FISHstory: Length Component

- Method developed to measure fish length

Identify scalar &
develop protocol

Test protocol

Train length
analysts

Coordinate &
measure King
Mackerel

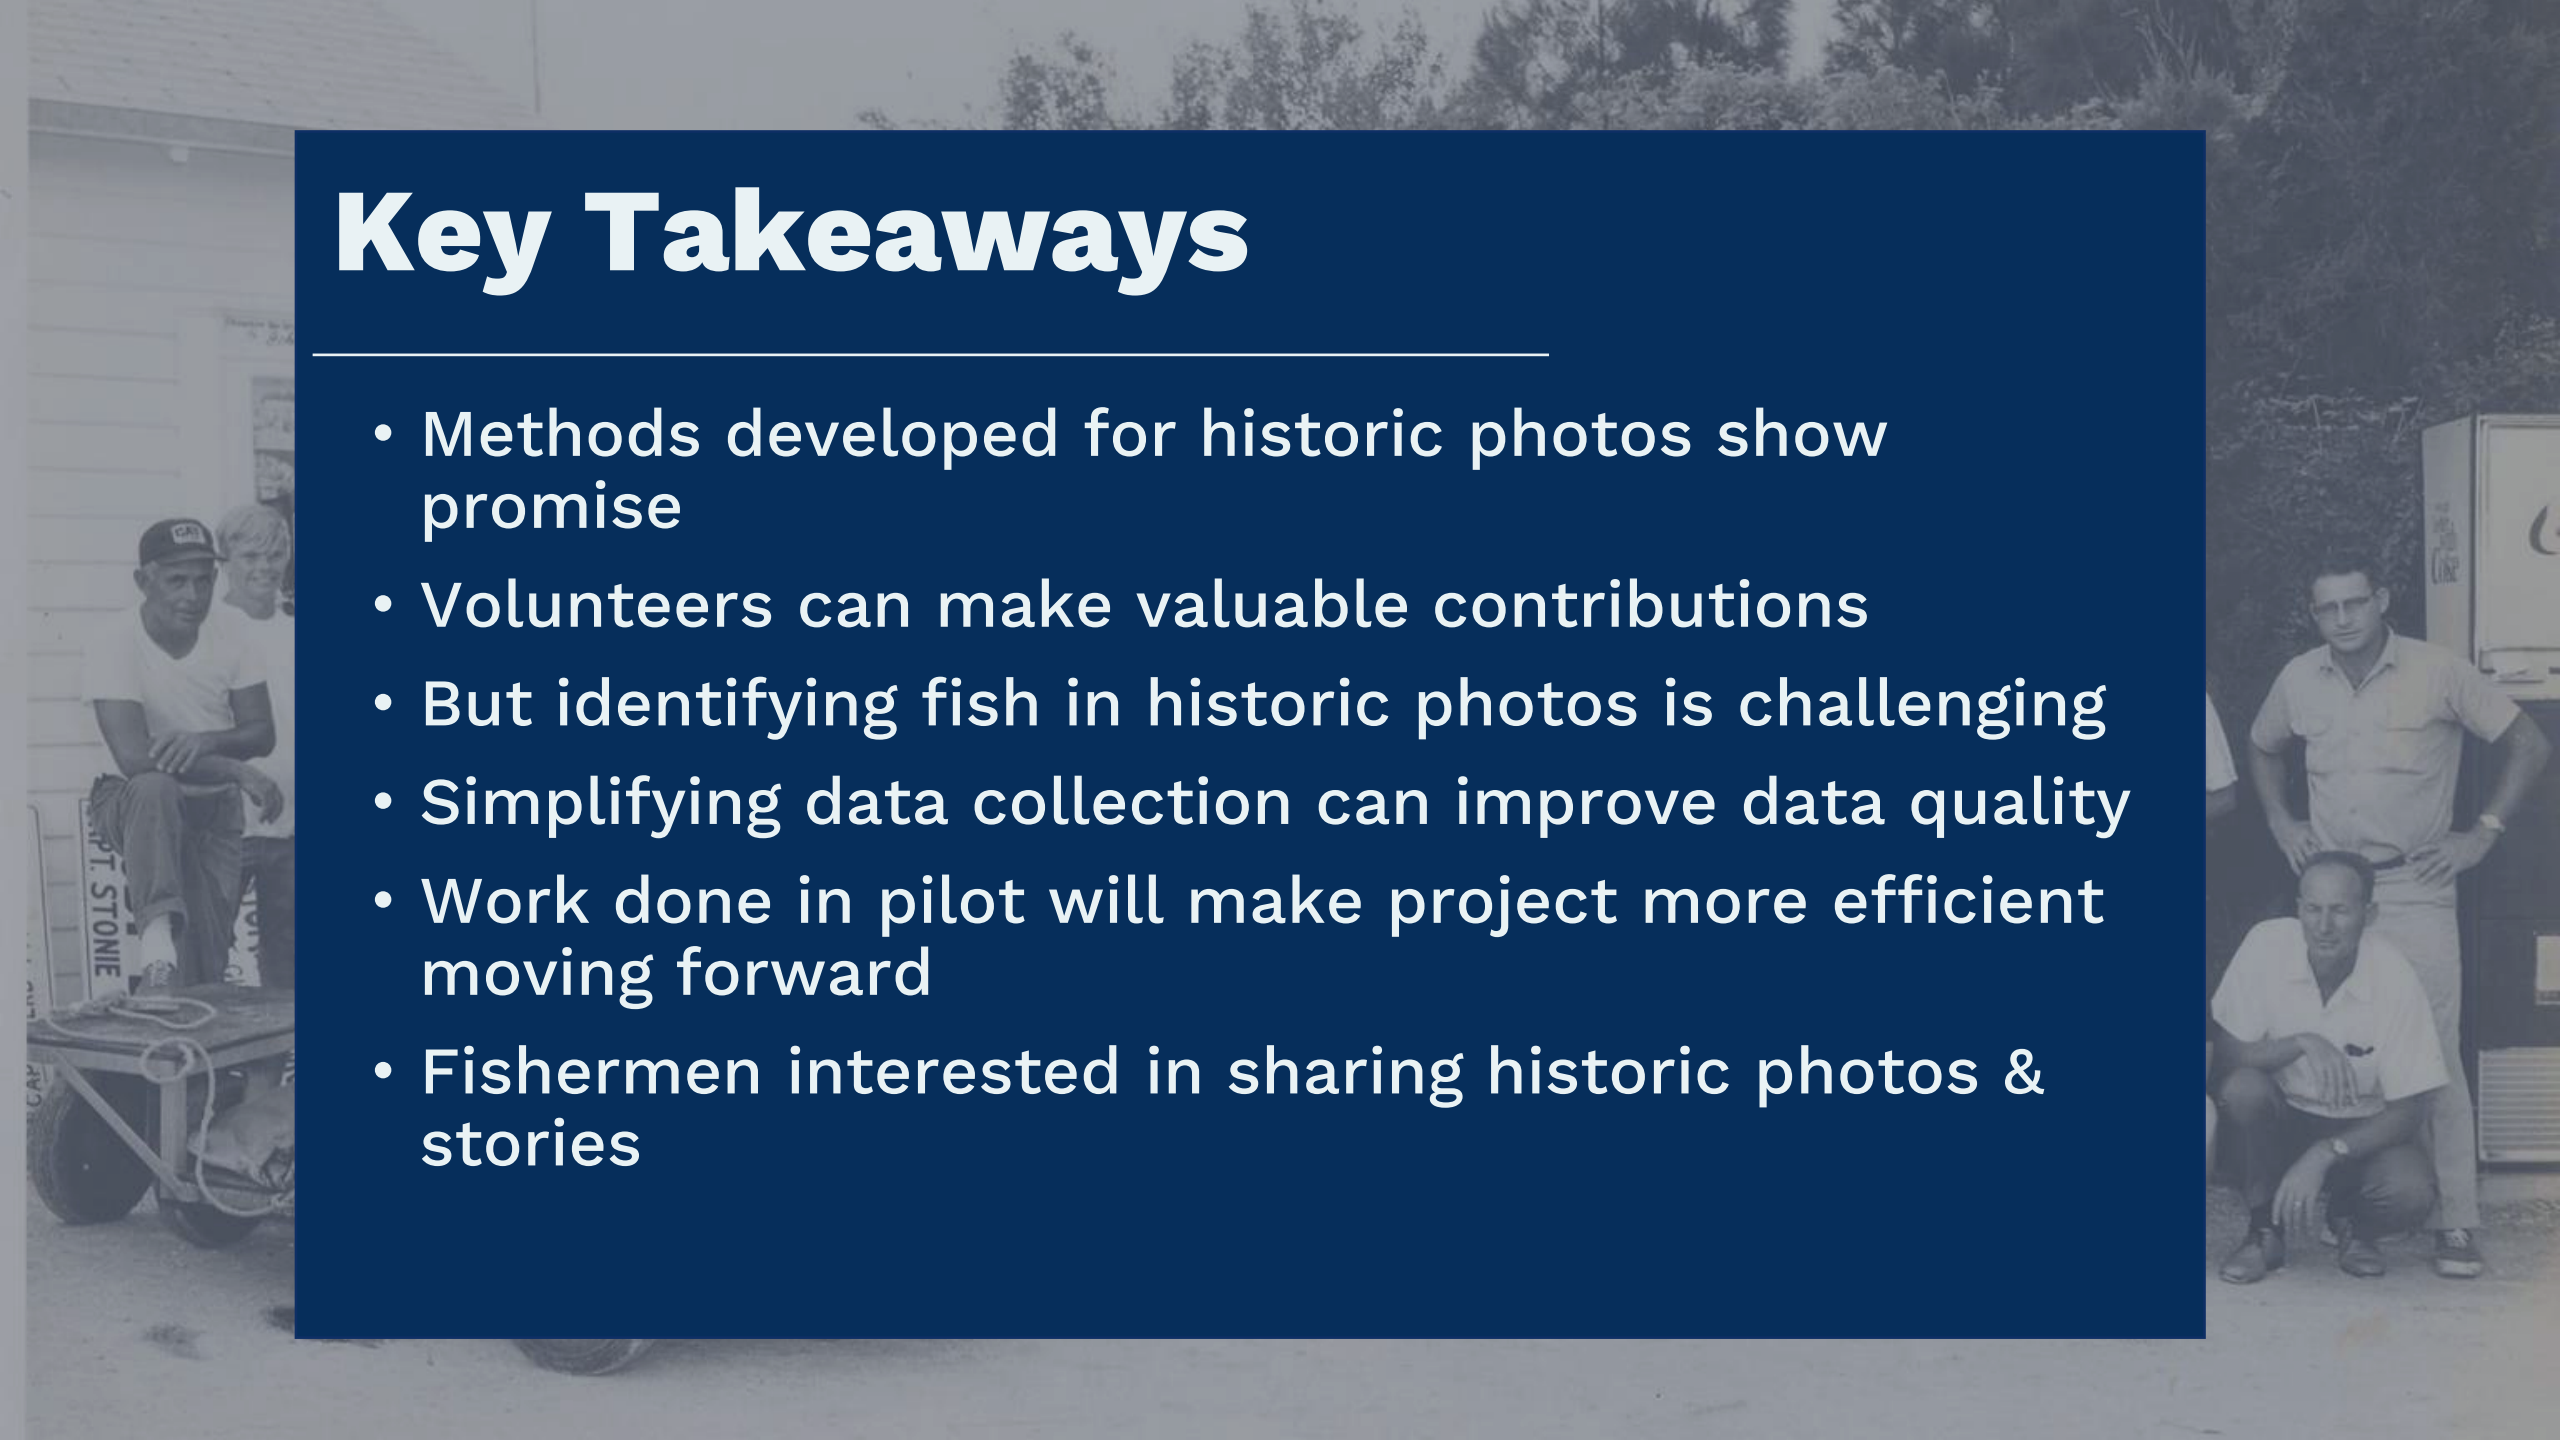

Share Results

King
Mackerel
length
compositions
by decade

Key Takeaways

- Methods developed for historic photos show promise
- Volunteers can make valuable contributions
- But identifying fish in historic photos is challenging
- Simplifying data collection can improve data quality
- Work done in pilot will make project more efficient moving forward
- Fishermen interested in sharing historic photos & stories

Next Steps

- Move from pilot to full scale project

Funding to
grow
project

Expand
geographic &
temporal
range of
photos

Improve
efficiency of
processes

Estimate
length
compositions
for more
species

Initial Program Evaluation Plan

- Gather baseline data on knowledge, attitudes, collaborations, engagement, and trust levels of various stakeholders in three stages:

Interviews

Complete: 6 fishermen, 6
scientists, 6 managers

Gather information
from broader group

Implement & analyze results

Interviewees

- **The 18 Interviews were conducted by Zoom and took from 30 to 45 minutes each. An initial draft of the findings was sent to all interviewees in mid-May 2022.**
- **All interviewees were highly experienced, and nearly all were familiar with the SAFMC, the stock assessment process, and how data are used to inform management decisions.**
- **Most of the fishermen have been fishing essentially all of their lives. Three are commercial fishermen, two are charter boat captains, and one is a recreational fisherman.**

Interview Key Findings

- **Opinions on the health of the South Atlantic US fishery varied:**
 - *Most scientists* felt that many species are declining and in poor health.
 - *Managers* tended to feel that fish stocks are doing better than scientists feel they are, especially for the most actively managed species.
 - *Fishermen* were the most pessimistic about the health of the fishery, with all but one stating that it's getting very hard to catch fish. Fishermen used terms like "depleted resources" and "depressing." One said that when he talks to fishermen his own age, he ends up crying.

Interview Key Findings

- **Regarding the sufficiency of data available to support fisheries management:**
 - *Scientists* tended to feel that sufficient data are available, especially for species that receive stock assessments. Only one scientist strongly felt that more data are needed.
 - *Managers* were unequivocal that more data are needed. Only one manager said that sufficient data are available, and only for some species.
 - *Fishermen* mostly felt that more data are needed. Four said that more data are needed; one stated that scientists rely too much on modeling, and another said that scientists and managers need to obtain more data from fishermen, as they are the experts on the water.

Interview Key Findings

- **Considering familiarity with citizen science:**
 - *Scientists* were generally familiar, but not particularly engaged. Four had not engaged with citizen science projects or data.
 - *Managers* were more involved than scientists; three have participated in at least one program.
 - *Fishermen* were the most engaged, largely with SAFMC projects, with five having participated in some way.

Interview Key Findings

- **Familiarity with the SAFMC Citizen Science Program:**
 - *All scientists* were at least passingly familiar. Three knew about its goals and objectives and two had advised on current projects. None of them were familiar with the list of research priorities.
 - *Most managers* did not know specifics about the program, and none were familiar with the list of research priorities.
 - *Most fishermen* were familiar with some of the specifics, with some having gathered data. One was familiar with the list of research priorities but called it “a bit broad.”

Interview Key Findings

- **Support and faith in citizen science:**
 - *All scientists* were generally supportive, but stressed the need for sound project design, and offered many caveats.
 - *Managers* were very supportive; four stated that fishermen would be able to collect a great deal of useful data.
 - *Fishermen* did not seem optimistic about the utility or uptake of citizen science. Many of them felt that scientists and managers would not use or trust the data. Two felt that fishermen mostly won't participate.

Interview Conclusions

- *Scientists* need to be convinced that projects have sound design and that their data are truly needed.
- *Managers* need to be convinced that scientists will use the data.
- *Fishermen* need to be convinced that scientists and managers will use the data.
- *The fisherman audience* needs to be studied in much more detail.
- Fishermen are three audiences. More interviews with members of each audience would be helpful.
- Research into needs/desires/motivations of fishermen & how best to reach fishermen are critical, which will require funding.

Initial Program Evaluation Plan

- Gather baseline data on knowledge, attitudes, collaborations, engagement, and trust levels of various stakeholders in three stages:

Interviews

Complete: 6 fishermen, 6 scientists, 6 managers

Gather information from broader group

Online survey – scientists & managers
More interviews – fishermen

Implement & analyze results

Keep Up with Projects & the Program!
