Partners: Recreational Anglers in South Atlantic

My Fish Count App Features

- Collect data on catch and effort
- Store pictures of caught/released fish
- Size and identification
- Geofence feature
- Allow anglers to record and access past trips
- Web portal

2017 Red Snapper Mini-Season

Opportunity:

- Pilot MyFishCount web portal.
- Collect information on red snapper fishery.

This is a Test Site. Do Not use it for Catch Logging.

MyFishCount

MyFishCount is a Pilot Platform for Recreational Fisherman to report red snapper catches in the South Atlantic region. Assist state and federal samplers by allowing them to sample your fish back at the dock or through carcass collection program. More information can be found on state and federal data collection programs for red snapper at the [South Atlantic Fishery Management Council's website](#).

The platform is designed for individual fisherman to report their own catch.

Dashboard

Member Profile

View Trips

This is a mobile site and cannot be accessed if a user is not in cellular range. Please save or print [this page](#) to allow you to collect information on the water.

Create Trips from Mobile Website

MyFishCount allows you to create trips from a mobile website. You can specify the area you are departing from, your method of fishing, details of your trip and more.

Log Your Catch

Once a trip is created, you can make as many catch logs as you want for red snapper during the mini-season. You can add details about your catch including location, length, weight, and release condition of the fish. These data are included as part of your trip and available for your reference at any time.

View Past Trips

You can view past trips in one central location. The data can be downloaded as a CSV to allow for convenient storage on your computer.

Data Fields

Trip Information

- Trip type
- Location
- Vessel
- Mode of fishing

Catch Information

- Depth and location of catch
- Kept or released
- Length and weight
- Hook type and location
- Reason for release
- Release method
- Photos of fish

This weekend, anglers from all corners of the South Atlantic submitted red snapper catch data to www.MyFishCount.com, a site created by the Council in collaboration with the [Snook and Gamefish Foundation](#) and [Elemental Methods / Elemental Mobile](#). Thank you to everyone who has already participated!

If you were unable to make it offshore due to weather, please report that too. It's useful information for future management decisions.

Share Your Red Snapper Story

We are excited to announce an opportunity for recreational fishermen to **voluntarily report their red snapper catch!** After hearing the requests of fishermen across the region, the South Atlantic Fishery Management Council and Snook and Gamefish Foundation, in partnership with Elemental Methods have teamed up to make recreational electronic reporting a possibility for the recently announced 2017 red snapper season. Learn how to report through the MyFishCount web portal by [clicking here!](#) **Note: This portal will not work offshore. It is not a mobile application.**

Please keep in mind that your participation will be absolutely critical to the development of future recreational reporting platforms. **This is a pilot.** Data collected here may be used for future management. Or it might simply be used as a vehicle to promote data collection efforts like this in the future. Either way, your entries are important, helpful, and valuable.

In addition to reporting through the web portal, we strongly encourage fishermen to participate in state-run sampling programs. State agencies will conduct dockside and phone interviews and may have freezers available to drop off carcasses. The state-run programs were used to collect data during previous mini-seasons and will likely be used to estimate landings. These programs are separate from MyFishCount so please answer the interviewers' questions and allow your fish to be sampled.

Know Before You Go

Recreational Regulations

- Open days: Friday, Saturday, and Sunday on the following dates -
 - November 3, 4, and 5
 - November 10, 11, and 12
- Bag limit: 1 fish per person
- Size limit: no minimum size limit
- Non-stainless steel circle hooks are required for all snapper grouper species when using hook-and-line gear with natural baits North of 28 degrees latitudes (Palm Beach, FL)

- Charter/head boat or recreational
- Red snapper kept and discarded
- Reason for release and treatment
- Map of kept and discarded fish

MyFishCount Report Based on Your Input

Thank you to all the MyFishCount users. We are gathering some great information that was not previously available for the private recreational fishery. We are providing you with preliminary information that has been reported through MyFishCount from weekend one of the 2017 red snapper mini-season.

Currently, there are over 100 people registered to use the web portal, MyFishCount. Below are some tables and charts you might find interesting based on your reports.

Thank you again to all the anglers who reported and provided information through MyFishCount. Please encourage your fellow anglers to continue to report this weekend. Information regarding the second mini-season weekend (November 10-12) will be made available next week. We will be sending updated information for the second weekend next week. If you have any questions or comments, please email Kelsey (Kelsey.dick@safmc.net) or Chip (chip.collier@safmc.net).

Thank you all for your support and time.

MyFishCount Results

This slide will show results from both weekend one and weekend two of the red snapper mini-season after the data has been analyzed.

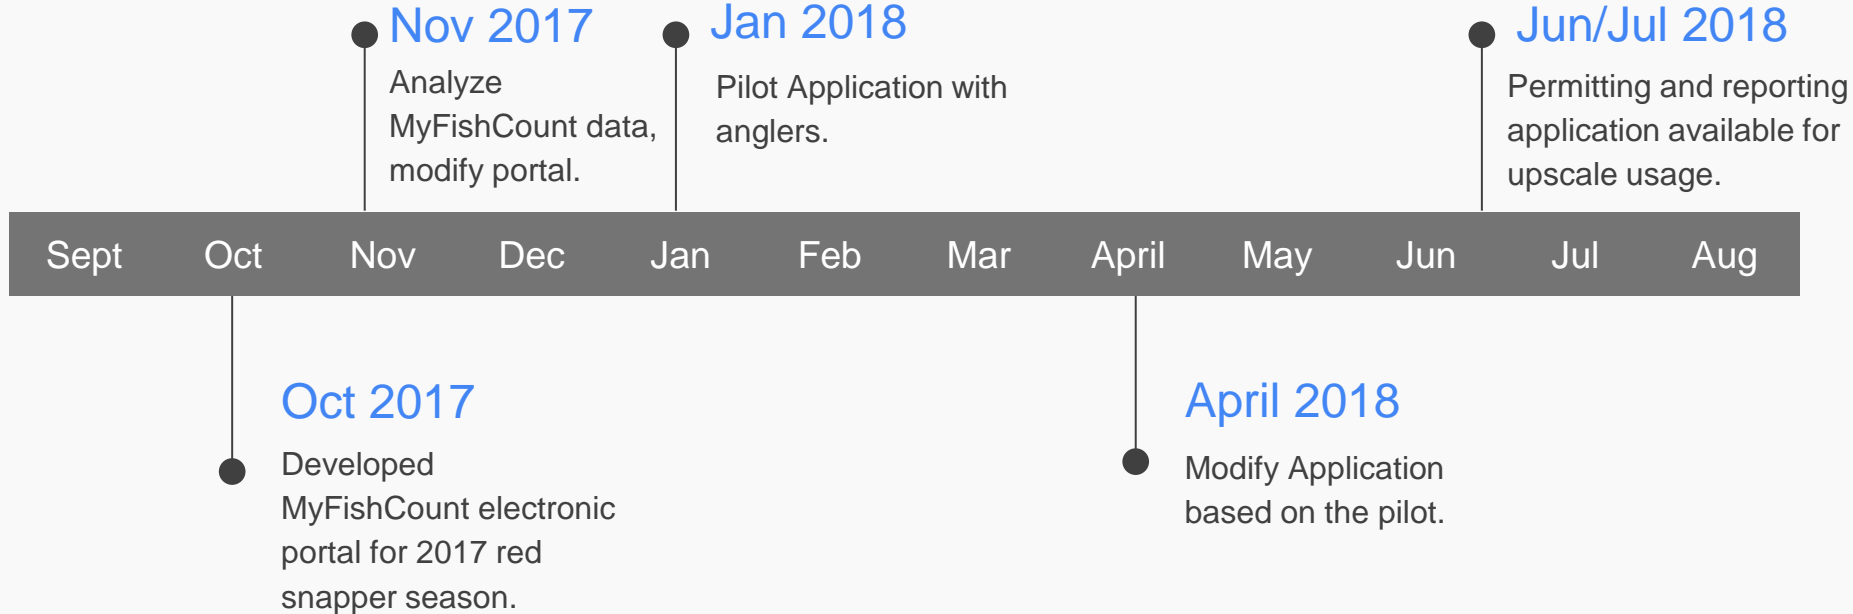

MyFishCount Compared to Other Data Collection Methods

This slide will show results from both weekend one and weekend two of the red snapper mini-season compared to previous MRIP years.
